<i>Preface</i>	<i>xi</i>
<i>Reviewers</i>	<i>xiii</i>

<b>I Overview of the Neuroanatomy of Auditory Periphery and Brainstem</b>	<b>I</b>
Scope	1
I. Auditory Periphery: Cochlear and Auditory Nerve Neuroanatomy	1
Cochlea: Structure and Functional Implications	1
Afferent Innervation of the Cochlea	4
Formation of the Auditory Nerve	5
II. Neuroanatomy of the Auditory Brainstem	5
Salient Features of Organization of Brainstem Structures and Pathways	5
Cochlear Nucleus (CN)	7
Superior Olivary Complex (SOC)	9
Nuclei of Lateral Lemniscus (NLL)	11
Inferior Colliculus (IC)	12
III. Efferent Pathways	14
Efferent Innervation of the Cochlea	14
Efferent Innervation of the IC	14
IV. Summary	16
V. Recommended Readings	17
Excellent Reviews With Sufficient Detail	17
References	17
<b>2 Neural Activity Underlying Scalp-Recorded Evoked Potentials</b>	<b>19</b>
Scope	19
I. Neuronal Physiology	19
Structure of a Neuron	19
Requirements for Neural Signaling	19
Generation and Maintenance of the Resting Membrane Potential (RMP)-Polarized Cell	20
Action Potential: Generation, Propagation, and Synaptic Transmission	21
II. Neural Bases of Evoked Potentials	24
III. Auditory Evoked Potentials (AEP): Classification and Types	27
IV. Summary	30
V. Recommended Readings	30
Excellent Review of Dipoles and Overview of Neuronal Physiology	30
References	30

<b>3</b>	<b>Stimuli and Data Acquisition Principles</b>	<b>31</b>
	Scope	31
	I. Stimulus Section	31
	Stimulus Type	31
	Transducer Type	34
	Calibration of Stimulus Intensity	35
	How Do These SPL Measures Translate to the dB nHL Scale?	36
	II. Analog Signal Conditioning and Preprocessing Section	38
	III. Digital Signal Processing Section	41
	IV. Summary	45
	V. Recommended Readings	46
	Excellent Chapters With More Details	46
	References	46
<b>4</b>	<b>Normative Aspects of the Auditory Evoked Responses From the Brainstem</b>	<b>47</b>
	Scope	47
	I. Auditory Brainstem Responses (ABRs)	47
	ABR Components and Response Morphology	47
	Neural Generators of the ABR Components	48
	Latency Correspondence Between Intracranial and Scalp-Recorded ABR Components	50
	Identification of ABR Generators in Individuals With Confirmed Focal Brainstem Lesions	51
	ABR Indices	52
	What Are the Physiological Determinants of ABR Latency and Amplitude?	53
	Response Amplitude	53
	Effects of Stimulus Factors	54
	Effects of Recording Factors	64
	Effects of Subject Factors	70
	II. Summary	74
	References	75
<b>5</b>	<b>Clinical Applications of the Auditory Brainstem Responses: Audiologic Applications for Hearing Screening and Threshold Estimation</b>	<b>83</b>
	Scope	83
	I. Hearing Screening	83
	Hearing Screening: Factors Determining Optimal Implementation	83
	Hearing Screening Protocols	86
	II. Frequency-Specific Threshold Estimation Using Auditory Brainstem Responses	95
	Frequency and Place Specificity	96
	Derived Narrowband Responses Using High-Pass Masking Noise on Click-Evoked ABRs	96
	Notched Noise Masking to Ensure Place Specificity of the ABR	98
	Estimation of the Air-Conduction Threshold Using ABRs Elicited by Frequency-Specific Tone Bursts	100
	Estimation of the Bone-Conduction Threshold Using ABRs Elicited by Frequency-Specific Tone Bursts	103

AC-ABR and BC-ABR Protocols for Threshold Estimation	106
Preliminary Considerations	106
ABR-AC and ABR-BC Threshold Estimation Procedure	108
Click ABR Protocol to Identify Auditory Neuropathy	110
Emergence of Narrowband Chirp Stimuli to Estimate AC-ABR and BC-ABR Thresholds	111
III. Frequency-Specific Threshold Estimation Using the Brainstem Auditory Steady-State Response (ASSR)	112
IV. Summary	116
References	117

## **6 Clinical Applications of the Auditory Brainstem Response: Differential Diagnosis** **125**

Scope	125
I. ABR in Conductive Hearing Loss (CHL)	125
Effects on ABR Characteristics	125
Effects of Chronic Middle Ear Infection on the Brainstem Response	129
CHL Causes Structural and Functional Changes in the Auditory Brainstem	130
II. ABR in Cochlear Hearing Loss	133
Effects on ABR Characteristics	133
Relationship Between Magnitude of Latency Shift and Degree and Configuration of Cochlear Hearing Loss	133
Relationship Between Slope of Wave V Latency-Intensity Function and Degree and Configuration of Cochlear Hearing Loss	135
Effects of Cochlear Hearing Loss on ABR Interpeak Latencies	138
III. ABR in Auditory Nerve and Brainstem Lesions	139
Effects on ABR Characteristics	139
Effects of Auditory Nerve and Lower (Caudal) Brainstem Lesions on the ABR	139
Abnormal Interpeak Latencies (IPL: I-III, I-V, and III-V)	141
Abnormal Interaural Latency Difference in Wave V (ILDv)	142
ABR Sensitivity Is Reduced in the Detection of Small Auditory Nerve Tumors	143
Stacked ABR as a Method to Improve Detection of Small Acoustic Tumors	145
Relationship Between ABR and Auditory Nerve Tumor Size	151
Bilateral Effects of Auditory Nerve and Lower Brainstem Lesions	151
Use of V/I Amplitude Ratio in the Detection of Auditory Nerve and Lower Brainstem Lesions	152
IV. ABR in Auditory Neuropathy (AN) and Cochlear Synaptopathy	153
Introduction	153
ABRs in Auditory Neuropathy	153
ABRs in Cochlear Synaptopathy	155
V. ABR in Upper (Rostral) Brainstem Lesions	161
ABR Characteristics	161
VI. ABR Test Strategy for Neurodiagnostic Evaluation of Site(s) of Lesion	162
Choice of Stimulus Parameters	162
Choice of Recording Parameters	163
VII. Summary	164
References	165

<b>7</b>	<b>Neurotologic Applications: Electrocochleography (ECoChG) and Intraoperative Monitoring (IOM)</b>	<b>175</b>
	Scope	175
	I. Electrocochleography (ECoChG)	175
	Cochlear Microphonic (CM)	176
	Clinical Applications of the CM	178
	Summating Potential (SP)	180
	Clinical Applications of SP	182
	Whole-Nerve Compound Action Potential (CAP)	184
	II. ABR Diagnostic Measure for Cochlear Hydrops: Cochlear Hydrops Analysis	190
	Masking Procedure (CHAMP)	
	III. The Electrical Compound Action Potential (eCAP) and Its Application in Cochlear Implants: Intracochlear ECoChG	191
	Response Characteristics	191
	Clinical Applications	193
	IV. Electrical ABR (eABR) and Its Application in Cochlear Implant Evaluation	194
	Response Characteristics of the Normal eABR	195
	Methods to Record and Analyze the eABR	197
	V. Application of Auditory Nerve and Brainstem Responses in Intraoperative Monitoring	198
	Introduction and Rationale	198
	Surgical Approaches	199
	Commonly Used Measures for IOM	200
	IOM Procedures and Interpretation of Changes in Response During Surgery	204
	Stimulus	204
	Response Recording	205
	Response Interpretation and Reporting	206
	Hearing Preservation (HP) in IOM	206
	VI. Summary	207
	References	210
<b>8</b>	<b>Brainstem Evoked Responses to Complex Sounds: Characteristics and Clinical Applications</b>	<b>219</b>
	Scope	219
	I. Envelope Following Response (EFR)	220
	II. Response Characteristics of EFRs Elicited by SAM Tones	222
	Effects of Intensity	223
	Effects of Carrier Frequency	224
	Effects of Modulation Rate	225
	Effects of Age	226
	III. Use of EFR in Auditory Threshold Estimation	227
	Air-Conduction Threshold Estimation in Adults and Infants With Normal Hearing (AC-EFR)	227
	Threshold Estimation in Adults and Infants With Sensorineural Hearing Loss	229
	Bone-Conduction Threshold Estimation in Normal and Hearing-Impaired Individuals (BC-EFR)	231
	IV. EFRs Elicited by Speech Sounds	232
	Characteristics of Speech Stimuli	232
	Response Characteristics of the EFR to the CV Syllable /da/	234

Effects of Stimulus Polarity on Speech-Evoked EFR	235
Test-Retest Reliability of the EFRs	235
Stimulus Specificity of the EFR	235
Potential Clinical Applications of EFRs	237
Effects of Cochlear Impairment on Envelope Encoding	237
Utility of EFR in Hearing Aid Outcome Measure	238
V. Frequency Following Response (FFR)	240
General Description	240
Response Characteristics	241
Effects of Stimulus Level	241
Effects of Stimulus Frequency	243
VI. Frequency Following Responses to Complex Sounds	244
Frequency Following Responses Representing Cochlear Nonlinearity	244
FFRs Elicited by Time-Variant Speech-Like and Speech Sounds	249
VII. Cochlear Regions Contributing to the FFR	250
VIII. How Is the Population Response Reflected in the FFR Related to Single-Neuron Activity?	253
IX. Neural Generators of the EFR/FFR	254
Early Research Supporting Brainstem Origin of the FFR	254
Current Views on the Neural Generators of the FFR	255
X. Clinical Applications of the FFR	257
XI. Recording and Analysis of EFR and FFR	261
Electrode Montage	261
Time-Domain Measures	264
Response Latency	264
Autocorrelation	266
Autocorrelogram (ACG)	266
Pitch Tracking Accuracy Using Autocorrelation	266
Phase Coherence	266
Frequency-Domain Measures	267
XII. Summary	268
References	269

<b>9 Research Applications of the Frequency Following Response</b>	<b>281</b>
Scope	281
I. Pitch: an Important Perceptual Attribute	281
Hierarchical Nature of Pitch Processing	283
II. Neural Representation of Pitch-Relevant Information of Complex Sounds	283
Neural Correlates of Pitch of Harmonic, Inharmonic, and Frequency-Shifted Sounds	283
Neural Correlates of Resolved Versus Unresolved Complex Sounds	287
Relative Roles of Envelope and Temporal Fine Structure in Pitch	291
Neural Correlates of Pitch Salience	294
Neural Representation of Speech in Adverse Listening Conditions	296
Effects of Reverberation	296
Effects of Background Noise	298
III. Neural Representation of Linguistic Pitch-Relevant Information in the Brainstem	300
Perceptual Attributes of Pitch in Tonal Languages	300
Language Experience-Dependent Plasticity in Pitch Processing in the Brainstem	301
Language Experience-Dependent Effects in the Brainstem Are Feature Specific	303

Domain Specificity of the Experience-Dependent Effects in the Brainstem	304
Experience-Dependent Effects Are More Resilient to Signal Degradation	306
Structural Versus Functional Asymmetries in Neural Representation	309
Hierarchical Processing as a Basis of Experience-Dependent Pitch Processing	311
IV. FFR Correlates of Binaural Processing	314
FFR Correlates of Binaural Interaction	314
FFR Correlates of Binaural Masking Level Difference (BMLD)	314
FFR Correlates of Spatial Release From Masking	317
Neural Representation of Vocoded Speech Sounds	318
EFR/FFR Applications in Different Populations—Potential for Development of Clinical Measures	324
V. Summary	324
References	325

## **10 Auditory Brainstem Responses Laboratory Exercises 337**

Scope	337
Preliminary Considerations for Recording Auditory Brainstem Responses	337
I. Effects of Stimulus Factors on the ABR Components	338
Lab 1. Effects of Stimulus Intensity of Click-Evoked ABR	338
Lab 2. Effects of Stimulus Intensity on the Broadband Chirp-Evoked ABR	340
Lab 3. Effects of Stimulus Frequency on Tone Burst-Evoked ABR	340
Lab 4. Effects of Stimulus Repetition Rate on the ABR	341
Lab 5. Effects of Stimulus Rise-Fall Time	342
Lab 6. Effects of Stimulus Onset Polarity on the ABR	343
II. Effects of Recording Parameters on the ABR	344
Lab 7. Effects of Number of Sweeps on Averaging the ABR	344
Lab 8. Effects of Recording Electrode Montage	345
Lab 9. Effects of High-Pass and Low-Pass Analog Filter Settings on the ABR	345
III. Threshold Estimation Using the ABR	346
Lab 10. Estimation of Air-Conduction Threshold Using Simulated Conductive Hearing Loss	346
IV. Threshold Assessment in Babies (Birth to Six Months)	347
Example of an ABR Protocol for Threshold Estimation in Babies	347
Lab 11. Identification and AC-ABR Threshold Estimation From ABR Waveforms Recorded From Infants	349
V. Interpretation of ABRs to Determine the Site of Lesion	356
Lab 12. Unmarked ABR Waveform Data (audiograms in some cases)	356
VI. Recording of Auditory Steady-State Response, Envelope Following Response, and Frequency Following Response	359
Lab 13. Recording and Analysis of ASSR	359
Lab 14. Recording and Analysis of EFRs and FFRs	359
VII. Protocol Consideration for Electrocochleography (ECochG)	360
VIII. Summary	360
IX. Recommended Reading	363
