Hearing 7th Ed. – Preface	xiii
1 Physical Concepts	1
Physical Quantities	1
Decibel Notation	6
Harmonic Motion and Sound	9
Combining Waves	16
Complex Waves	18
Filters	21
Standing Waves	22
Impedance	24
Notes	26
References	26
2 Anatomy	27
Gross Anatomy and Overview	27
Temporal Bone	28
Outer Ear	32
Pinna	32
Ear Canal	32
Eardrum	33
Middle Ear	33
Ossicular Chain	35
Intratympanic Muscles	36
Inner Ear	37
Osseous and Membranous Labyrinths	37
Inner Ear Fluids	38
Vestibular Organs	39
Cochlea	39
Hair Cells	44
Innervation	49
Efferent Innervation of the Hair Cells	52
Central Auditory Pathways	53
Ascending Auditory Pathways	53
Descending Auditory Pathways	58
Notes	60
References	60
	vii

3	Conductive Mechanism	71
	Outer Ear	71
	Pinna	71
	Ear Canal	72
	Middle Ear	73
	Middle Ear Transformer Mechanism	74
	Middle Ear Response	78
	Bone Conduction	80
	Middle Ear Muscle (Acoustic) Reflex	83
	Reflex Parameters	84
	Notes	93
	References	93
4	Cochlear Mechanisms and Processes	99
	Action of Sensory Receptors	99
	Classical Theories of Hearing	100
	Classical Resonance Theory	100
	Traveling Wave Theory	101
	Classical Temporal Theories	101
	Place-Volley Theory	102
	The Traveling Wave	103
	Hair Cell Activation	105
	Mechanoelectrical Transduction	107
	Cochlear Electrical Potentials	108
	Resting Potentials	109
	Receptor Potentials	110
	Cochlear Microphonics	110
	Cochlear Tuning and Frequency Selectivity	117
	Nonlinearity in the Cochlea	123
	Active Processes and the Cochlear Amplifier	124
	The Presin Motor	126
	Otoacoustic Emissions	126
	Notes	132
	References	132
5	Auditory Nerve	141
	Frequency Coding	142
	Tuning Curves	142
	Firing Patterns	143
	Two-Tone Suppression	148
	Intensity Coding	150
	Speech Coding	154
	Whole-Nerve Action Potentials	155
	Note	159
	References	159
6	Auditory Pathways	163
	Responses of the Auditory Nervous System	163
	Binaural and Related Responses	165
	Brainstem	165
	Medial Geniculate Body	168

Cortex	169
Tonotopic Organization	169
Cochlear Nuclei	169
Superior Olivary Complex	171
Lateral Lemniscus	171
Inferior Colliculus	172
Medial Geniculate Body	173
Cortex	173
Frequency-Following Response	177
Auditory Steady-State Response	179
Medial Olivocochlear Reflex	182
Notes	186
References	186
7 Psychoacoustic Methods	203
Scales of Measurement	203
Measurement Methods	204
Classical Methods of Measurement	205
Adaptive Methods	209
Forced-Choice Formats	216
Direct Scaling	217
Notes	219
References	219
8 Signal Detection Theory	225
Factors Affecting Responses	225
d-Prime (d')	227
Beta (β)	227
ROC Curves	229
Psychophysical Methods in SDT	230
Yes/No Methods	230
Forced-Choice Methods	230
Confidence Rating Methods	231
Some Implications of Signal Detection Theory	231
Note	231
References	231
9 Auditory Sensitivity	233
Absolute Sensitivity	233
Minimum Audible Levels	233
Threshold Microstructure	235
Upper Limits of Hearing	235
Reference Levels	236
Hearing Level	236
Effects of Duration	238
Differential Sensitivity	240
Intensity Discrimination	241
Frequency Discrimination	243
Profile Analysis	245
Temporal Resolution	247
Temporal Discrimination	249

	Stimulus Uncertainty	250
	Temporary Threshold Shift	250
	Appendix 9.1	253
	Appendix 9.2	253
	Notes	253
	References	253
10	Masking	261
	Partial Masking	262
	Nature of Masking	262
	Frequency Selectivity	266
	Psychoacoustic Tuning Curves	270
	Comodulation Masking Release	271
	Overshoot	273
	Temporal Masking	275
	Central Masking	277
	Informational Masking	278
	Note	281
	References	281
11	Loudness	287
	Loudness Level	287
	Weighted Sound Levels	289
	Loudness Scaling and Loudness Functions	290
	Loudness and Distance	293
	Loudness and Bandwidth	294
	Temporal Integration of Loudness	295
	Loudness Adaptation	296
	Induced Loudness Reduction	298
	Binaural Loudness Summation	299
	Time-Varying Sounds	301
	Noisiness and Annoyance	301
	Notes	303
	References	303
12	Pitch	311
	Mel Scales of Pitch	311
	Musical Pitch	312
	Tone Height and Chroma	314
	Pitch and Intensity	317
	Beats, Harmonics, and Combination Tones	317
	Pitch of Complex Sounds	320
	Resolved and Unresolved Harmonics	320
	Mistuned Harmonics	323
	Periodicity Pitch and the Missing Fundamental	324
	Pitch Shift of the Missing Fundamental	327
	Existence Region of Pitch	327
	Pitch Theories	328
	Place/Spectral Theories	328
	Temporal Theories	329
	Notes	330
	References	331

13	Timbre	337
	Audio Descriptors	337
	Spectral Descriptors	337
	Temporal Descriptors	339
	Spectrotemporal Descriptors	339
	Musical Timbre	340
	Timbre of Environmental Sounds	343
	Neural Correlates of Timbre Perception	343
	Consonance and Dissonance	344
	Notes	345
	References	346
14	Binaural and Spatial Hearing	351
	Binaural Fusion	351
	Binaural Beats	352
	Binaural Summation	352
	Differential Sensitivity	353
	Auditory Scene Analysis	354
	Directional Hearing	355
	Azimuth and Elevation	355
	Interaural Differences	356
	Externalization	357
	Localization	358
	Lateralization	362
	Virtual Auditory Space Localization	365
	Minimum Audible Angle	366
	Minimum Audible Movement Angle	367
	Directional Hearing in Infants	368
	Species Differences in Directional Hearing	368
	Auditory Distance Perception	368
	Precedence Effect	370
	Masking Level Differences	374
	Notes	378
	References	379
15	Speech and Its Perception	391
	Speech Sounds: Production and Perception	392
	Vowels	392
	Consonants	394
	Dichotic Listening and Cerebral Lateralization	399
	The Speech Mode	400
	Duplex Perception	400
	Sine Wave Speech	401
	Categorical Perception	401
	McGurk Effect	403
	Power of Speech Sounds	404
	Speech Intelligibility	405
	Audibility: Speech Level and Signal-to-Noise Ratio	405
	Frequency	405
	Amplitude Distortion	407
	Interruptions and Temporal Distortion	407

Masking and Reverberation	408
Nonacoustic Considerations	410
Speech Intelligibility and Acoustical Measurements	411
Clear Speech	413
Speech Perception Theories and Approaches	414
Models Implicating the Production System	414
General Auditory Approaches	415
Word Recognition Models	416
Notes	417
References	417
Name Index	433
Subject Index	465
