Foreword	xix
Preface	xx
Acknowledgments	xxi
Contributors	xxii

1 Diagnostic Audiology	1		
<i>Samuel R. Atcherson and Patricia Gaffney</i>			
1.1 Introduction	1	1.6 The Effectiveness of Diagnostic Audiological Tests	3
1.2 Scope of Practice in Audiology and Licensure	2	1.6.1 Clinical Decision-Making	4
1.3 Screening versus Diagnostic Tests	2	1.6.2 Evidence-Based Practice	4
1.4 Diagnostic Tests in Audiology	2	1.7 Audiology and Public Health	6
1.4.1 Vestibular Testing: A Growing Specialty	3	1.8 Audiology through Telepractice	6
1.5 Patient-Reported Outcome Measures as Diagnostic Tools	3	1.9 Communication of Diagnostic Results	6
		References	7
2 Acoustic Stimuli Used in Diagnostic Audiology	9		
<i>Samuel R. Atcherson, M. Bryson Howard, and Jason W. Johnson</i>			
2.1 Introduction	9	2.2.3 Speech Stimuli	14
2.1.1 Listening Conditions for Acoustic Stimuli	9	2.2.4 Transient Stimuli Used in Audiology	18
2.1.2 Visualizing the Properties of Acoustic Stimuli	11	2.3 Other Stimuli Used in Diagnostic Audiology	20
2.2 Types of Stimuli Used in Audiology	12	2.4 Conclusion	21
2.2.1 Tonal Stimuli	12	References	21
2.2.2 Noise	13		
3 Basic Instrumentation and Calibration	23		
<i>Ahmad A. Alanazi</i>			
3.1 Introduction	23	3.3.1 Electroacoustic Calibration vs. Biologic Calibration	25
3.2 Instrumentation Standards	23	3.4 Auditory Instrumentation	25
3.2.1 American National Standards Institute (ANSI) ..	23	3.4.1 Tuning Forks	25
3.2.2 International Organization for Standardization (ISO)	23	3.4.2 Otoscope	26
		3.4.3 Audiology Sound Booth	26
3.3 Calibration	25	3.4.4 Transducers	26

3.4.5	Audiometer	27	3.5.1	Electronystagmography/ Videonystagmography	30
3.4.6	Acoustic Immittance	28	3.5.2	Vestibular Evoked Myogenic Potential	30
3.4.7	Otoacoustic Emissions	29	3.5.3	Computerized Dynamic Posturography	30
3.4.8	Electrophysiology	29	3.5.4	Rotary Chair	31
3.5	Vestibular Instrumentation	30		References	31
4	Disorders of the Auditory and Vestibular Systems	33			
	<i>Samuel R. Atcherson, Nannette Nicholson, Chad Ruffin, and Dawn M. O'Brien-Taylor</i>				
4.1	Introduction	33	4.5	Disorders of the Inner Ear and Internal Auditory Canal	39
4.2	Otologic Examination	33	4.5.1	Sensorineural Hearing Loss	39
4.2.1	History	33	4.5.2	Sudden Sensorineural Hearing Loss	39
4.2.2	Physical and Visual Examination of the Pinna and Ear Canal	33	4.5.3	Noise-Induced Hearing Loss	39
4.2.3	Otalgia	33	4.5.4	Age-Related Hearing Loss	40
4.2.4	Otorrhea	34	4.5.5	Ototoxicity	40
4.2.5	Hearing Loss	34	4.5.6	Vestibular Neuronitis	41
4.2.6	Tinnitus	34	4.5.7	Benign Paroxysmal Positional Vertigo	41
4.2.7	Dizziness and Vertigo	34	4.5.8	Perilymph Fistula	41
4.2.8	Trauma	35	4.5.9	Ménière's Disease/Otologic Migraine	41
4.3	Disorders of the Pinna and Ear Canal	35	4.5.10	Large Vestibular Aqueduct Syndrome	41
4.3.1	Ear Itch, Dermatitis, Chronic Otitis Externa	35	4.5.11	Labyrinthitis	42
4.3.2	Acute Otitis Externa	35	4.5.12	Autoimmune Inner Ear Disease	42
4.3.3	Otomycosis (Fungal Otitis Externa)	36	4.5.13	Superior Semicircular Canal Dehiscence	43
4.3.4	Malignant Otitis Externa	36	4.5.14	Tumors of the Internal Auditory Canal and Cerebellopontine Angle	43
4.3.5	Osteomas and Exostoses	36	4.5.15	Vascular Compression Syndrome/Vascular Loop	43
4.3.6	Keratinosis Obturans	36	4.5.16	Vertebrobasilar Insufficiency	43
4.3.7	Cholesteatoma of the Ear Canal	36	4.6	Other Complex Disorders Involving Auditory and/or Vestibular Challenges	44
4.3.8	Referred Otalgia	36	4.6.1	Hidden Hearing Loss	44
4.3.9	Perichondritis	37	4.6.2	Auditory Processing Disorder	44
4.3.10	Myringitis	37	4.6.3	Hyperacusis	44
4.4	Disorders of the Tympanic Membrane, Middle Ear, and Mastoid Process	37	4.6.4	Motion Sickness and Mal de Débarquement	44
4.4.1	Myringosclerosis and Tympanosclerosis	37	4.7	Congenital Disorders	45
4.4.2	Tympanic Membrane Perforations	37	4.7.1	Congenital Aural Atresia and Anotia/Microtia	45
4.4.3	Eustachian Tube Dysfunction	37	4.7.2	Ossicular Chain Abnormalities	45
4.4.4	Otitis Media	37	4.7.3	Cochlear Anomalies	45
4.4.5	Cholesteatoma	38	4.7.4	Cochlear Nerve Anomalies (Deficiency)	46
4.4.6	Otosclerosis	38	4.8	Conclusion	46
4.4.7	Ossicular Chain Discontinuity	39		References	47
4.4.8	Neoplasms of the Middle Ear	39			
5	Genetics of Hearing Loss	49			
	<i>Tiffany Lepard and G. Bradley Schaefer</i>				
5.1	Genetic Etiology of Hearing Loss	49	5.2.1	Nomenclature	49
5.2	Nonsyndromic Hearing Loss	49	5.2.2	Autosomal Recessive	50
			5.2.3	Autosomal Dominant	51

5.2.4	X-linked	51	5.5.2	Chromosomal Microarray (CMA)	55
5.2.5	Mitochondrial	52	5.5.3	Single Gene Sequencing	55
5.2.6	Multifactorial	52	5.5.4	Next-Generation Sequencing	56
5.3	Syndromic Hearing Loss	52	5.5.5	Multigene Panels	56
5.4	Interpreting Family Histories	53	5.5.6	Whole Exome Sequencing	56
5.4.1	Autosomal Dominant	53	5.5.7	Whole Genome Sequencing	56
5.4.2	Autosomal Recessive	54	5.5.8	Mitochondrial Testing	57
5.4.3	X-linked	54	5.5.9	Metabolic Testing	57
5.4.4	Mitochondrial	55	5.6	Benefits and Limitations of Testing	57
5.4.5	Multiple or Unknown Inheritance Patterns	55	5.6.1	Determining Etiology	57
5.4.6	Multifactorial	55	5.6.2	Familial Implications	57
5.5	Genetic Testing Methods	55	5.6.3	Attitudes and Opinions of Testing	57
5.5.1	Chromosome Analysis	55	5.6.4	Psychosocial Impact	58
			References	58	
6	Radiology and Imaging of Auditory and Vestibular Disorders	61			
	<i>Razan Al Fakir (Alfakir)</i>				
6.1	Introduction	61	6.4.5	Interpretation of the MRI	68
6.2	Radiology and Imaging of Auditory and Vestibular Disorders	62	6.4.6	MRI Approaches	68
6.2.1	Temporal Bone Overview: Key Structures	62	6.4.7	Other MRI Approaches	70
6.3	Computed Tomography Imaging	64	6.5	Strengths and Limitations of HRCT and MRI	71
6.3.1	HRCT: The Basics	65	6.6	Auditory and Vestibular Lesions	71
6.3.2	Temporal Bone Landmarks on HRCT Scan	65	6.6.1	Lesions Involving the Membranous and Bony Labyrinth	73
6.3.3	Interpretation of the HRCT scan	67	6.6.2	Bony Labyrinth Lesions	76
6.4	Magnetic Resonance Imaging (MRI)	67	6.6.3	Lesions Involving the ICA	76
6.4.1	MRI: The Basics	67	6.6.4	Lesions Involving the CPA	77
6.4.2	MRI Technique	67	6.6.5	Lesions Involving Central Auditory and Vestibular Pathways	77
6.4.3	MRI Protocols	67	References	78	
6.4.4	Temporal Bone Landmarks on MRI	68			
7	Pharmaceuticals and Nutraceuticals in Audiology	81			
	<i>Robert M. DiSogra</i>				
7.1	Introduction to Pharmaceuticals	81	7.2	Nutraceuticals in Audiology	84
7.1.1	The Evolution of the U.S. Food and Drug Administration (FDA)	81	7.2.1	Nutraceuticals and Dietary Supplements for Hearing Loss, Tinnitus, or Vertigo	84
7.1.2	The Premarket Approval Regulation	81	7.2.2	Good Manufacturing Practice (GMP) for Supplements	85
7.1.3	Clinical Trials	82	7.2.3	Who's Minding the Store on OTC Tinnitus Products?	85
7.1.4	Clinical Research Access	82	7.2.4	Side Effects of Nutraceuticals—Reporting to the FDA	85
7.1.5	Reporting Adverse Drug Reactions	82	7.2.5	Advertising Dietary Supplements	85
7.1.6	Pharmacological Terms	82	7.2.6	Over-the-Counter (OTC) Tinnitus Relief Products	85
7.1.7	Pharmaceutical Categories That Cause Hearing Loss	83	7.2.7	"At-Risk" Groups Who Should Avoid Dietary Supplements for Tinnitus	86
7.1.8	Routes of Drug Administration	83			
7.1.9	Research Status	84			
7.1.10	Audiometric Testing Protocols	84			

7.2.8	Costs	86	7.3.1	Drug Schedules.	86
7.2.9	Published Nutraceutical Research—Does It Exist?	86	7.3.2	Role of the Audiologist	87
7.2.10	What If.....	86		References.....	87
7.3	New Directions for Audiology—Prescriptive Rights	86			
8	Outer Ear Examination	89			
	<i>Bopanna Ballachanda and Robert M. DiSogra</i>				
8.1	Introduction.....	89	8.4	Pathologies and Other Abnormal Findings of the Outer Ear	93
8.2	Instrumentation	89	8.4.1	Congenital Abnormalities.....	93
8.2.1	Headlight	89	8.4.2	Acquired Infections	93
8.2.2	Otoscope	89	8.4.3	Neoplasms.....	97
8.2.3	Video Otoscope.....	89	8.5	Cerumen Management	97
8.2.4	Surgical Loupe.....	90	8.6	Conclusion.....	97
8.2.5	Operating Microscope	90		References.....	97
8.2.6	Aural Specula.....	91			
8.3	Ear Canal Examination	91			
9	Pure Tone Tests	99			
	<i>Clifford A. Franklin and Thomas C. Franklin</i>				
9.1	Introduction.....	99	9.7.2	Conductive Hearing Loss.....	107
9.2	Physical Description of Pure Tones	99	9.7.3	Sensorineural Hearing Loss	108
9.2.1	Frequency	99	9.7.4	Mixed Hearing Loss	108
9.2.2	Intensity.....	101	9.8	Degree of Hearing Loss	109
9.3	Frequency and Intensity Function of the Human Ear	101	9.9	Pure Tone Air and Bone Conduction Procedures	109
9.4	Pure Tone Test Equipment: The Audiometer	101	9.9.1	Pure Tone Air Conduction.....	109
9.4.1	Audiometer Types.....	102	9.9.2	Case History	109
9.5	Audiometer Components	103	9.9.3	Test Environment.....	110
9.5.1	Power (On–Off) Switch	103	9.9.4	Infection Control	110
9.5.2	Frequency Selector Dial (Oscillator).....	104	9.9.5	Listener Position.....	111
9.5.3	Tone Interrupter (Tone Reverse) Switch	104	9.9.6	Instructions to the Patient	111
9.5.4	Amplifier	104	9.9.7	Examination of the Ear	111
9.5.5	Attenuator (Hearing Level Dial)	104	9.9.8	Ear Selection.....	111
9.5.6	Signal Router Switch.....	104	9.9.9	Test Frequencies.....	112
9.5.7	Masking Level Controller.....	105	9.9.10	Stimulus Type.....	112
9.5.8	Transducers (Earphones, Bone Oscillators, and Loudspeakers).....	105	9.9.11	Presentation Order.....	112
9.5.9	Signal Selector Switch	105	9.9.12	Masking.....	112
9.5.10	Calibration of Audiometers	105	9.9.13	Earphone Placement	112
9.6	The Audiogram and Audiometric Symbols	106	9.9.14	Response Strategy	112
9.7	Types of Hearing Loss	106	9.9.15	Threshold Procedure	113
9.7.1	Normal Findings	107	9.9.16	False Negative and False Positive Responses	114
			9.10	Pure Tone Bone Conduction (B/C) Audiometry.....	115
			9.10.1	Modes of Bone Conduction.....	115
			9.10.2	Tuning Fork Tests	115
			9.10.3	Placement of the Bone Conduction Vibrator/Oscillator.....	116

9.10.4	Bone Vibrator Types and Force on Mastoid Surface Area	117	9.12	Hearing Screening	119
9.10.5	Bone Conduction Testing Procedures	117	9.13	Conclusion	120
9.10.6	Limitations of Bone Conduction Testing	118		References	120
9.10.7	Bone Conduction and Pseudo-Sensorineural Hearing Loss	118			
9.11	Describing Pure Tone Findings	118			
10	Clinical Audiometric Masking	123			
	<i>Jackie L. Clark and Ross J. Roeser</i>				
10.1	Introduction	123	10.9.3	Speech Recognition Threshold Testing	133
10.2	What is Masking?	123	10.9.4	Word Recognition Testing	134
10.2.1	Masking versus Effective Masking	124	10.10	How Much Masking is Needed?	134
10.2.2	Clinical Masking	124	10.10.1	General Principles	134
10.3	Central Masking	125	10.10.2	Undermasking	134
10.4	The Need for Masking	125	10.10.3	The Plateau	134
10.5	Considerations in Clinical Masking	126	10.10.4	Overmasking	135
10.5.1	Interaural Attenuation	126	10.11	Specific Procedures	135
10.5.2	Air-Conduction Interaural Attenuation	126	10.11.1	Establishing the Starting Level	135
10.5.3	Bone-Conduction Interaural Attenuation	127	10.11.2	Determining Masking Levels for Pure-Tone Air-Conduction Testing	136
10.5.4	The Occlusion Effect	127	10.11.3	Determining Masking Levels for Pure-Tone Bone-Conduction Threshold Testing	137
10.6	Types of Clinical Masking Noises	128	10.11.4	Determining Masking Levels for Speech Recognition Threshold Testing	139
10.6.1	Broadband or White (Thermal) Noise	128	10.11.5	Determining Masking Levels for Word Recognition Testing	141
10.6.2	Narrowband Noise	128	10.11.6	The Masking Dilemma	142
10.6.3	Speech Noise	129	10.11.7	Masking with Special Populations	143
10.7	Calibrating Masking Signals	129	10.12	Case Studies	143
10.7.1	Biological Method of Calibrating Effective Masking Levels	130	10.12.1	Case Study No. 1	143
10.8	The Application of Clinical Masking	131	10.12.2	Case Study No. 2	145
10.9	When is Masking Needed?	131	10.12.3	Case Study No. 3	145
10.9.1	Pure-Tone Air-Conduction Testing	132	10.13	Summary	148
10.9.2	Pure-Tone Bone-Conduction Testing	132		References	148
11	Speech Audiometry	149			
	<i>Lisa Lucks Mendel</i>				
11.1	Introduction	149	11.3.1	Communication Handicap	150
11.1.1	What is Speech Audiometry?	149	11.3.2	Differential Diagnosis	151
11.1.2	Historical Background	149	11.3.3	Audiologic Rehabilitation and Amplification	153
11.2	Terminology	150	11.4	Appropriate and Currently Calibrated Instrumentation	153
11.3	Purposes for Conducting Speech Audiometry	150	11.5	Traditional Measurements in Speech Audiometry	153

11.5.1	Speech Thresholds	153	11.10.1	Response Format	162
11.5.2	Suprathreshold Word Recognition	155	11.10.2	Scoring Methods	163
11.6	Speech Audiometry Test Materials	155	11.10.3	Alternative Forms of a Test	164
11.6.1	Meaningful Monosyllabic Word Tests	155	11.10.4	Test Administration Time	164
11.6.2	Phoneme Recognition Tests	156	11.11	Methodologic Variability in the Assessment of Speech Perception	164
11.6.3	Nonsense Syllable Tests	157	11.11.1	Stimulus Familiarity and Lexical Considerations	164
11.6.4	Sentence Tests	157	11.11.2	Phonetic/Phonemic Balancing	165
11.7	Speech-in-Noise Testing	158	11.11.3	Use of a Carrier Phrase	165
11.7.1	Noise, Hearing Loss, and Understanding Speech	158	11.11.4	Presentation Format of Test Materials	165
11.7.2	Speech-in-Noise Tests	158	11.11.5	Presentation Levels	166
11.7.3	A Final Word on Speech-in-Noise Testing	160	11.11.6	Partial- versus Full-List Test Presentation	166
11.8	Clinical Application of SNR Loss	160	11.11.7	Number of Test Items	166
11.9	Speech Audiometry in Children	161	11.12	A Final Word about Methodologic Variability and Test Sensitivity	167
11.10	Test Administration Variables	162	References	168	
12	Audiologic Evaluation of Special Populations	171			
	<i>Angela Shoup and Ross J. Roeser</i>				
12.1	Considerations in Evaluating Special Populations	171	12.3	Older Adults	178
12.1.1	Cognitive Status	171	12.3.1	Considerations in Diagnostic Testing	178
12.1.2	Cross-Check Principle	171	12.4	Children with Intellectual/Physical Challenges	179
12.1.3	Patients from Diverse Cultural Backgrounds: A Growing Need	171	12.4.1	Developmental Disabilities	179
12.1.4	Interprofessional Practice and Audiology	172	12.4.2	Patients with Major and Mild Neurocognitive Disorder	182
12.2	Infants and Young Children (0–5 Years)	172	12.4.3	Visual Impairment	183
12.2.1	Test Environment	172	12.5	Pseudohypoacusis	183
12.2.2	Test Stimuli	174	12.5.1	Diagnostic Testing	184
12.2.3	0 to 6 Months Developmental Age	174	12.6	Conclusion	186
12.2.4	6 to 24 Months Developmental Age	175	References	186	
12.2.5	2 to 5 Years Developmental Age	176			
12.2.6	Speech Thresholds and Word Intelligibility	177			
12.2.7	Physiological Tests	177			
12.2.8	Auditory Neuropathy Spectrum Disorders (ANSO)	178			
13	Assessment of Tinnitus and Hyperacusis	189			
	<i>Ali A. Danesh, Hashir Aazh, and James W. Hall III</i>				
13.1	Definitions of Tinnitus and Hyperacusis	189	13.3	Hyperacusis	195
13.1.1	Tinnitus	189	13.3.1	Hyperacusis Assessment	195
13.1.2	Hyperacusis	189	13.3.2	History Taking	197
13.2	Audiological Assessment of Tinnitus	189	13.3.3	Self-Report Questionnaires	197
13.2.1	Targeted Patient History	190	13.3.4	Loudness Discomfort Levels (LDLs)	198
13.2.2	Diagnostic Audiological Assessment	190	13.3.5	LDL Test Procedure	198
