For Parents

Engaging in brain exercises has been becoming increasingly popular among brain researchers over the past couple of years. These exercises come in various forms and have been made available to individuals. The Brain Club for Kids series is one of the earliest attempts to design exercises that systematically and purposefully engage eight important brain functions, including attention, memory, response inhibition, flexibility, visual-spatial processing, reasoning, processing speed, and hand-eye coordination. The Brain Club for Kids series combines storytelling with game-like and engaging exercises to encourage children to participate in challenging brain exercises. Furthermore, in a new step, this series has also been translated into English so that children can become familiar with English vocabulary while engaging in brain exercises. We hope that you and your children find the activities in this book helpful and use them on a regular basis.

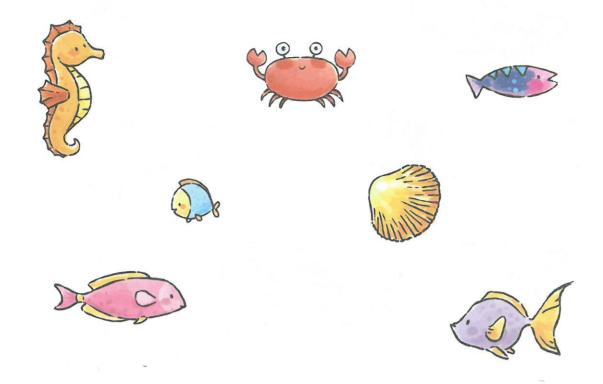

Best of luck!

Dr. Tara Rezapour and Dr. Hamed Ekhtiari

• Now, without returning the previous page, circle those seaweeds that Kitteny was swimming nearby.

(5) Kitteny found many other friends. You can see them on this page. Can you memorize them all?

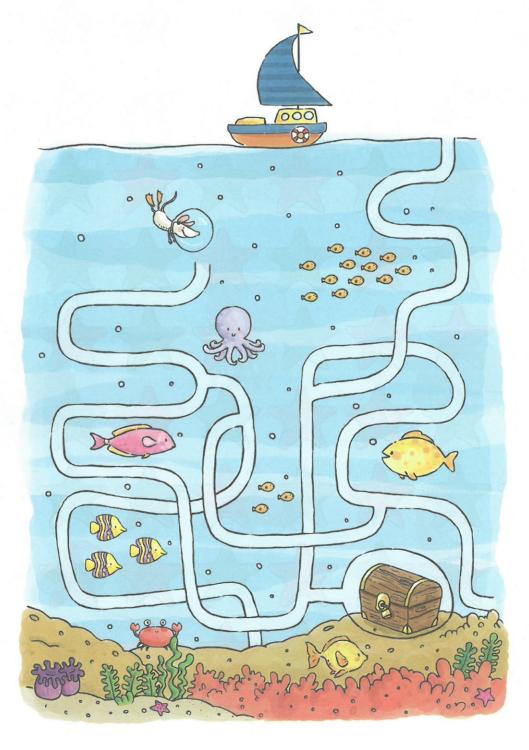

You can also draw a fish that you want to be friends with when you can go deep down the sea.

Step

Hand-Eye Coordination and Processing Speed

acation Time Mooshy's Family

1 Didn't you miss Mooshy? Mooshy's family has just reached the beach that Kitteny's family has been at. Kitteny told a lot of good memories about his underwater diving. So, why doesn't Mooshy give it a try? He has just dived into the water and deep down the sea, he sees something glowing. Can it be a treasure box? Try to help him find his way to it.

Kitteny introduced Mooshy to some of his new friends that he made. Do you want to color them like the model?
